PROFESSIONAL SUMMARY

Computer Science student with hands-on experience in AI/ML, computer vision, and full-stack development. Skilled in Python, Java, C++, React.js, and Node.js, with a track record of building and deploying end-to-end applications, from computer vision pipelines to production web platforms. Experienced in AI/ML data annotation and preprocessing workflows that support model training. Seeking AI/ML Engineer, Computer Vision, or Full-Stack (MERN) Developer roles.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript

Web & Full-Stack: React.js, Node.js, Express.js, MongoDB, Firebase, REST APIs, HTML, CSS

AI / Machine Learning: Computer Vision, YOLOv8, PyTorch, XGBoost, Random Forest, Kalman Filtering, AI/ML Data Annotation

Tools & Practices: Git/GitHub, CI/CD Pipelines, Gemini API, Google Maps API

EXPERIENCE

DevOps & Full-Stack (MERN) Developer

March 2026 – June 2026

- Contributed to the Threat-Fence cybersecurity platform using the MERN stack (MongoDB, Express.js, React.js, Node.js).
- Developed and maintained frontend components and backend services for scalable web applications.
- Designed and integrated RESTful APIs to support platform functionality and secure data exchange.
- Implemented and maintained CI/CD pipelines to automate build, testing, and deployment.
- Collaborated via Git/GitHub for version control, code reviews, and team-based development.
- Optimized application performance, resolved bugs, and improved system reliability.

AI/ML Data Annotator

April 2025 – June 2026

- Annotated and labeled datasets with high accuracy to support AI/ML model training.
- Wrote Python scripts to filter, preprocess, and structure raw data for model readiness.
- Validated and cross-checked annotated data to minimize errors and improve model performance.
- Identified anomalies and edge cases in data, applying corrective measures to improve dataset quality.
- Collaborated with AI/ML teams to deliver clean, structured, reliable datasets and optimized data preparation workflows.

PROJECTS

Cricket LBW Decision Review System — Computer Vision, Machine Learning, YOLOv8, Python

- Built an AI-powered LBW review system automating cricket umpiring decisions from match footage.
- Trained a custom YOLOv8 model for ball and stump detection and applied Kalman filtering for trajectory tracking.
- Predicted ball movement using polynomial regression and combined XGBoost/Random Forest models with MCC Law 36 rule-based logic for real-time verdicts.

LAPA — AI Deep Learning Project for Medical Imaging

- Developed a deep learning model to detect COVID-19, pneumonia, pleural effusion, cardiomegaly, pneumothorax, and tuberculosis from chest X-rays.
- Built a combined real and synthetic X-ray dataset, including question-answer pairs for medical visual question answering (VQA).
- Implemented data preprocessing, model training, and evaluation in Python and PyTorch, optimizing for accuracy and scalability.

Freelancer Marketplace Website — Full-Stack Web Development

- Built a full-stack marketplace connecting clients with service providers, with responsive UI in HTML, CSS, and JavaScript.
- Implemented user authentication, role-based dashboards, job posting, profile management, and real-time messaging.

AI-Powered Pakistan Travel Chatbot — Full-Stack Development

- Built a web-based AI travel assistant delivering mood-based city recommendations using the Gemini API.
- Integrated Google Maps and user reviews; applied object-oriented design with a modular React.js architecture.

EDUCATION

Bachelor of Science in Computer Science

August 2023 – August 2027

Information Technology University of Punjab — Specialization in Information Technology

CERTIFICATIONS & ACHIEVEMENTS

- Meraal Cybersecurity Certificate — 3-Day ISO/IEC 27001 ISMS Cybersecurity Training
- Ripah Computing Cup Challenge — Android Application Development
- Information Technology University — Competitive Programming: Code Rush
- Information Technology University — Machine Learning Hackathon: Code Rush
